## 4 / The Intertwining—The Chiasm

IF IT IS TRUE that as soon as philosophy declares itself to be reflection or coincidence it prejudices what it will find, then once again it must recommence everything, reject the instruments reflection and intuition had provided themselves, and install itself in a locus where they have not yet been distinguished, in experiences that have not yet been "worked over," that offer us all at once, pell-mell, both "subject" and "object," both existence and essence, and hence give philosophy resources to redefine them. Seeing, speaking, even thinking (with certain reservations, for as soon as we distinguish thought from speaking absolutely we are already in the order of reflection), are experiences of this kind, both irrecusable and enigmatic. They have a name in all languages, but a name which in all of them also conveys significations in tufts, thickets of proper meanings and figurative meanings, so that, unlike those of science, not one of these names clarifies by attributing to what is named a circumscribed signification. Rather, they are the repeated index, the insistent reminder of a mystery as familiar as it is unexplained, of a light which, illuminating the rest, remains at its source in obscurity. If we could rediscover within the exercise of seeing and speaking some of the living references that assign them such a destiny in a language, perhaps they would teach us how to form our new instruments, and first of all to understand our research, our interrogation, themselves.

The visible about us seems to rest in itself. It is as though our vision were formed in the heart of the visible, or as though there were between it and us an intimacy as close as between the sea

[130]

and the strand. And yet it is not possible that we blend into it, nor that it passes into us, for then the vision would vanish at the moment of formation, by disappearance of the seer or of the visible. What there is then are not things first identical with themselves, which would then offer themselves to the seer, nor is there a seer who is first empty and who, afterward, would open himself to them—but something to which we could not be closer than by palpating it with our look, things we could not dream of seeing "all naked" because the gaze itself envelops them, clothes them with its own flesh. Whence does it happen that in so doing it leaves them in their place, that the vision we acquire of them seems to us to come from them, and that to be seen is for them but a degradation of their eminent being? What is this talisman of color, this singular virtue of the visible that makes it, held at the end of the gaze, nonetheless much more than a correlative of my vision, such that it imposes my vision upon me as a continuation of its own sovereign existence? How does it happen that my look, enveloping them, does not hide them, and, finally, that, veiling them, it unveils them?

We must first understand that this red under my eyes is not, as is always said, a *quale*, a pellicle of being without thickness, a message at the same time indecipherable and evident, which one has or has not received, but of which, if one has received it, one knows all there is to know, and of which in the end there is nothing to say. It requires a focusing, however brief; it emerges from a less precise, more general redness, in which my gaze was caught, into which it sank, before—as we put it so aptly—*fixing* it. And, now that I have fixed it, if my eyes penetrate into it, into

1. EDITOR: Here in the course of the text itself, these lines are inserted: "it is that the look is itself incorporation of the seer into the visible, quest for itself, which is of it, within the visible—it is that the visible of the world is not an envelope of *quale*, but what is between the qualia, a connective tissue of exterior and interior horizons—it is as flesh offered to flesh that the visible has its aseity, and that it is mine—The flesh as *Sichtigkeit* and generality. → whence vision is question and response. . . . The openness through flesh: the two leaves of my body and the leaves of the visible world. . . . It is between these intercalated leaves that there is visibility. . . . My body model of the things and the things model of my body: the body bound to the world through all its parts, up against it → all this means: the world, the flesh not as fact or sum of facts, but as the locus of an inscription of truth: the false crossed out, not nullified."

its fixed structure, or if they start to wander round about again, the *quale* resumes its atmospheric existence. Its precise form is bound up with a certain woolly, metallic, or porous [?] configuration or texture, and the *quale* itself counts for very little compared with these participations. Claudel has a phrase saying that a certain blue of the sea is so blue that only blood would be more red. The color is yet a variant in another dimension of variation, that of its relations with the surroundings: this red is what it is only by connecting up from its place with other reds about it, with which it forms a constellation, or with other colors it dominates or that dominate it, that it attracts or that attract it, that it repels or that repel it. In short, it is a certain node in the woof of the simultaneous and the successive. It is a concretion of visibility, it is not an atom. The red dress a fortiori holds with all its fibers onto the fabric of the visible, and thereby onto a fabric of invisible being. A punctuation in the field of red things, which includes the tiles of roof tops, the flags of gatekeepers and of the Revolution, certain terrains near Aix or in Madagascar, it is also a punctuation in the field of red garments, which includes, along with the dresses of women, robes of professors, bishops, and advocate generals, and also in the field of adornments and that of uniforms. And its red literally is not the same as it appears in one constellation or in the other, as the pure essence of the Revolution of 1917 precipitates in it, or that of the eternal feminine, or that of the public prosecutor, or that of the gypsies dressed like hussars who reigned twenty-five years ago over an inn on the Champs-Élysées. A certain red is also a fossil drawn up from the depths of imaginary worlds. If we took all these participations into account, we would recognize that a naked color, and in general a visible, is not a chunk of absolutely hard, indivisible being, offered all naked to a vision which could be only total or null, but is rather a sort of straits between exterior horizons and interior horizons ever gaping open, something that comes to touch lightly and makes diverse regions of the colored or visible world resound at the distances, a certain differentiation, an ephemeral modulation of this world—less a color or a thing, therefore, than a difference between things and colors, a momentary crystallization of colored being or of visibility. Between the alleged colors and visibles, we would find anew the tissue that lines them, sustains them, nourishes them, and which

for its part is not a thing, but a possibility, a latency, and a *flesh* of things.

If we turn now to the seer, we will find that this is no analogy or vague comparison and must be taken literally. The look, we said, envelops, palpates, espouses the visible things. As though it were in a relation of pre-established harmony with them, as though it knew them before knowing them, it moves in its own way with its abrupt and imperious style, and yet the views taken are not desultory—I do not look at a chaos, but at things—so that finally one cannot say if it is the look or if it is the things that command. What is this prepossession of the visible, this art of interrogating it according to its own wishes, this inspired exegesis? We would perhaps find the answer in the tactile palpation where the questioner and the questioned are closer, and of which, after all, the palpation of the eye is a remarkable variant. How does it happen that I give to my hands, in particular, that degree, that rate, and that direction of movement that are capable of making me feel the textures of the sleek and the rough? Between the exploration and what it will teach me, between my movements and what I touch, there must exist some relationship by principle, some kinship, according to which they are not only, like the pseudopods of the amoeba, vague and ephemeral deformations of the corporeal space, but the initiation to and the opening upon a tactile world. This can happen only if my hand, while it is felt from within, is also accessible from without, itself tangible, for my other hand, for example, if it takes its place among the things it touches, is in a sense one of them, opens finally upon a tangible being of which it is also a part. Through this crisscrossing within it of the touching and the tangible, its own movements incorporate themselves into the universe they interrogate, are recorded on the same map as it; the two systems are applied upon one another, as the two halves of an orange. It is no different for the vision—except, it is said, that here the exploration and the information it gathers do not belong “to the same sense.” But this delimitation of the senses is crude. Already in the “touch” we have just found three distinct experiences which subtend one another, three dimensions which overlap but are distinct: a touching of the sleek and of the rough, a touching of the things—a passive sentiment of the body and of its space—and finally a veritable touching of the touch, when my right

hand touches my left hand while it is palpating the things, where the "touching subject" passes over to the rank of the touched, descends into the things, such that the touch is formed in the midst of the world and as it were in the things. Between the massive sentiment I have of the sack in which I am enclosed, and the control from without that my hand exercises over my hand, there is as much difference as between the movements of my eyes and the changes they produce in the visible. And as, conversely, every experience of the visible has always been given to me within the context of the movements of the look, the visible spectacle belongs to the touch neither more nor less than do the "tactile qualities." We must habituate ourselves to think that every visible is cut out in the tangible, every tactile being in some manner promised to visibility, and that there is encroachment, infringement, not only between the touched and the touching, but also between the tangible and the visible, which is entrusted in it, as, conversely, the tangible itself is not a nothingness of visibility, is not without visual existence. Since the same body sees and touches, visible and tangible belong to the same world. It is a marvel too little noticed that every movement of my eyes—even more, every displacement of my body—has its place in the same visible universe that I itemize and explore with them, as, conversely, every vision takes place somewhere in the tactile space. There is double and crossed situating of the visible in the tangible and of the tangible in the visible; the two maps are complete, and yet they do not merge into one. The two parts are total parts and yet are not superposable.

Hence, without even entering into the implications proper to the seer and the visible, we know that, since vision is a palpation with the look, it must also be inscribed in the order of being that it discloses to us; he who looks must not himself be foreign to the world that he looks at. As soon as I see, it is necessary that the vision (as is so well indicated by the double meaning of the word) be doubled with a complementary vision or with another vision: myself seen from without, such as another would see me, installed in the midst of the visible, occupied in considering it from a certain spot. For the moment we shall not examine how far this identity of the seer and the visible goes, if we have a complete experience of it, or if there is something missing, and what it is. It suffices for us for the moment to note that he who sees cannot possess the visible unless he is possessed by it,

unless he is of it,\* unless, by principle, according to what is required by the articulation of the look with the things, he is one of the visibles, capable, by a singular reversal, of seeing them—he who is one of them.†

We understand then why we see the things themselves, in their places, where they are, according to their being which is indeed more than their being-perceived—and why at the same time we are separated from them by all the thickness of the look and of the body; it is that this distance is not the contrary of this proximity, it is deeply consonant with it, it is synonymous with it. It is that the thickness of flesh between the seer and the thing is constitutive for the thing of its visibility as for the seer of his corporeity; it is not an obstacle between them, it is their means of communication. It is for the same reason that I am at the heart of the visible and that I am far from it: because it has thickness and is thereby naturally destined to be seen by a body. What is indefinable in the *quale*, in the color, is nothing else than a brief, peremptory manner of giving in one sole something, in one sole tone of being, visions past, visions to come, by whole clusters. I who see have my own depth also, being backed up by this same visible which I see and which, I know very well, closes in behind me. The thickness of the body, far from rivaling that of the world, is on the contrary the sole means I have to go unto the heart of the things, by making myself a world and by making them flesh.

The body interposed is not itself a thing, an interstitial matter, a connective tissue, but a *sensible for itself*, which means, not that absurdity: color that sees itself, surface that touches itself—but this paradox [?]: a set of colors and surfaces inhabited by a touch, a vision, hence an *exemplar sensible*, which offers to him who inhabits it and senses it the wherewithal to sense everything that resembles himself on the outside, such that, caught up in the tissue of the things, it draws it entirely to itself, incorporates it, and, with the same movement, communicates to the things upon which it closes over that identity without superposition, that difference without contradiction, that divergence between the within and the without that constitutes its

\* The *Uerpräsenbarkett* is the flesh.

† The visible is not a tangible zero, the tangible is not a zero of visibility (relation of encroachment).

natal secret.<sup>2</sup> The body unites us directly with the things through its own ontogenesis, by welding to one another the two outlines of which it is made, its two laps: the sensible mass it is and the mass of the sensible wherein it is born by segregation and upon which, as seer, it remains open. It is the body and it alone, because it is a two-dimensional being, that can bring us to the things themselves, which are themselves not flat beings but beings in depth, inaccessible to a subject that would survey them from above, open to him alone that, if it be possible, would coexist with them in the same world. When we speak of the flesh of the visible, we do not mean to do anthropology, to describe a world covered over with all our own projections, leaving aside what it can be under the human mask. Rather, we mean that carnal being, as a being of depths, of several leaves or several faces, a being in latency, and a presentation of a certain absence, is a prototype of Being, of which our body, the sensible sentient, is a very remarkable variant, but whose constitutive paradox already lies in every visible. For already the cube assembles within itself impossible *visibilia*, as my body is at once phenomenal body and objective body, and if finally it is, it, like my body, is by a tour de force. What we call a visible is, we said, a quality pregnant with a texture, the surface of a depth, a cross section upon a massive being, a grain or corpuscle borne by a wave of Being. Since the total visible is always behind, or after, or between the aspects we see of it, there is access to it only through an experience which, like it, is wholly outside of itself. It is thus, and not as the bearer of a knowing subject, that our body commands the visible for us, but it does not explain it, does not clarify it, it only concentrates the mystery of its scattered visibility; and it is indeed a paradox of Being, not a paradox of man, that we are dealing with here. To be sure, one can reply that, between the two "sides" of our body, the body as sensible and the body as sentient (what in the past we called objective body and phenomenal body), rather than a spread, there is the abyss that

2. Erroron: Here, in the course of the text itself, between brackets, these lines are inserted: "One can say that we perceive the things themselves, that we are the world that thinks itself—or that the world is at the heart of our flesh. In any case, once a body-world relationship is recognized, there is a ramification of my body and a ramification of the world and a correspondence between its inside and my outside, between my inside and its outside."

separates the In Itself from the For Itself. It is a problem—and we will not avoid it—to determine how the sensible sentient can also be thought. But here, seeking to form our first concepts in such a way as to avoid the classical impasses, we do not have to honor the difficulties that they may present when confronted with a *cogito*, which itself has to be re-examined. Yes or no: do we have a body—that is, not a permanent object of thought, but a flesh that suffers when it is wounded, hands that touch? We know: hands do not suffice for touch—but to decide for this reason alone that our hands do not touch, and to relegate them to the world of objects or of instruments, would be, in acquiescing to the bifurcation of subject and object, to forego in advance the understanding of the sensible and to deprive ourselves of its lights. We propose on the contrary to take it literally to begin with. We say therefore that our body is a being of two leaves, from one side a thing among things and otherwise what sees them and touches them; we say, because it is evident, that it unites these two properties within itself, and its double belongingness to the order of the "object" and to the order of the "subject" reveals to us quite unexpected relations between the two orders. It cannot be by incomprehensible accident that the body has this double reference; it teaches us that each calls for the other. For if the body is a thing among things, it is so in a stronger and deeper sense than they: in the sense that, we said, it is of *them*, and this means that it detaches itself upon them, and, accordingly, detaches itself from them. It is not simply a thing seen in fact (I do not see my back), it is visible by right, it falls under a vision that is both ineluctable and deferred. Conversely, if it touches and sees, this is not because it would have the visibles before itself as objects: they are about it, they even enter into its enclosure, they are within it, they line its looks and its hands inside and outside. If it touches them and sees them, this is only because, being of their family, itself visible and tangible, it uses its own being as a means to participate in theirs, because each of the two beings is an archetype for the other, because the body belongs to the order of the things as the world is universal flesh. One should not even say, as we did a moment ago, that the body is made up of two leaves, of which the one, that of the "sensible," is bound up with the rest of the world. There are not in it two leaves or two layers; fundamentally it is neither thing seen only nor seer only, it is Visibility sometimes

wandering and sometimes reassembled. And as such it is not in the world, it does not detain its view of the world as within a private garden: it sees the world itself, the world of every body, and without having to leave "itself," because it is wholly—because its hands, its eyes, are nothing else than—this reference of a visible, a tangible-standard to all those whose resemblance it bears and whose evidence it gathers, by a magic that is the vision, the touch themselves. To speak of leaves or of layers is still to flatten and to juxtapose, under the reflective gaze, what coexists in the living and upright body. If one wants metaphors, it would be better to say that the body sensed and the body sentient are as the obverse and the reverse, or again, as two segments of one sole circular course which goes above from left to right and below from right to left, but which is but one sole movement in its two phases. And everything said about the sensed body pertains to the whole of the sensible of which it is a part, and to the world. If the body is one sole body in its two phases, it incorporates into itself the whole of the sensible and with the same movement incorporates itself into a "Sensible in itself." We have to reject the age-old assumptions that put the body in the world and the seer in the body, or, conversely, the world and the body in the seer as in a box. Where are we to put the limit between the body and the world, since the world is flesh? Where in the body are we to put the seer, since evidently there is in the body only "shadows stuffed with organs," that is, more of the visible? The world seen is not "in" my body, and my body is not "in" the visible world ultimately: as flesh applied to a flesh, the world neither surrounds it nor is surrounded by it. A participation in and kinship with the visible, the vision neither envelops it nor is enveloped by it definitively. The superficial pellicle of the visible is only for my vision and for my body. But the depth beneath this surface contains my body and hence contains my vision. My body as a visible thing is contained within the full spectacle. But my seeing body subtends this visible body, and all the visibles with it. There is reciprocal insertion and intertwining of one in the other. Or rather, if, as once again we must, we eschew the thinking by planes and perspectives, there are two circles, or two vortexes, or two spheres, concentric when I live naïvely, and as soon as I question myself, the one slightly decentered with respect to the other. . . .

We have to ask ourselves what exactly we have found with

this strange adhesion of the seer and the visible. There is vision, touch, when a certain visible, a certain tangible, turns back upon the whole of the visible, the whole of the tangible, of which it is a part, or when suddenly it finds itself *surrounded* by them, or when between it and them, and through their commerce, is formed a Visibility, a Tangible in itself, which belong properly neither to the body qua fact nor to the world qua fact—as upon two mirrors facing one another where two indefinite series of images set in one another arise which belong really to neither of the two surfaces, since each is only the rejoinder of the other, and which therefore form a couple, a couple more real than either of them. Thus since the seer is caught up in what he sees, it is still himself he sees: there is a fundamental narcissism of all vision. And thus, for the same reason, the vision he exercises, he also undergoes from the things, such that, as many painters have said, I feel myself looked at by the things, my activity is equally passivity—which is the second and more profound sense of the narcissism: not to see in the outside, as the others see it, the contour of a body one inhabits, but especially to be seen by the outside, to exist within it, to emigrate into it, to be seduced, captivated, alienated by the phantom, so that the seer and the visible reciprocate one another and we no longer know which sees and which is seen. It is this Visibility, this generality of the Sensible in itself, this anonymity innate to Myself that we have previously called flesh, and one knows there is no name in traditional philosophy to designate it. The flesh is not matter, in the sense of corpuscles of being which would add up or continue on one another to form beings. Nor is the visible (the things as well as my own body) some "psychic" material that would be—God knows how—brought into being by the things factually existing and acting on my factual body. In general, it is not a fact or a sum of facts "material" or "spiritual." Nor is it a representation for a mind: a mind could not be captured by its own representations; it would rebel against this insertion into the visible which is essential to the seer. The flesh is not matter, is not mind, is not substance. To designate it, we should need the old term "element," in the sense it was used to speak of water, air, earth, and fire, that is, in the sense of a *general thing*, midway between the spatio-temporal individual and the idea, a sort of incarnate principle that brings a style of being wherever there is a fragment of being. The flesh is in this sense an "element" of Being. Not a fact

or a sum of facts, and yet adherent to *location* and to the *now*. Much more: the inauguration of the *where* and the *when*, the possibility and exigency for the fact; in a word: facticity, what makes the fact be a fact. And, at the same time, what makes the facts have meaning, makes the fragmentary facts dispose themselves about "something." For if there is flesh, that is, if the hidden face of the cube radiates forth somewhere as well as does the face I have under my eyes, and coexists with it, and if I who see the cube also belong to the visible, I am visible from elsewhere, and if I and the cube are together caught up in one same "element" (should we say of the seer, or of the visible?), this cohesion, this visibility by principle, prevails over every momentary discordance. In advance every vision or very partial visible that would here definitively come to naught is not nullified (which would leave a gap in its place), but, what is better, it is replaced by a more exact vision and a more exact visible, according to the principle of visibility, which, as though through a sort of abhorrence of a vacuum, already invokes the true vision and the true visible, not only as substitutes for their errors, but also as their explanation, their relative justification, so that they are, as Husserl says so aptly, not erased, but "crossed out." . . . Such are the extravagant consequences to which we are led when we take seriously, when we question, vision. And it is, to be sure, possible to refrain from doing so and to move on, but we would simply find again, confused, indistinct, non-clarified, scraps of this ontology of the visible mixed up with all our theories of knowledge, and in particular with those that serve, desultorily, as vehicles of science. We are, to be sure, not finished ruminating over them. Our concern in this preliminary outline was only to catch sight of this strange domain to which interrogation, properly so-called, gives access. . . .

But this domain, one rapidly realizes, is unlimited. If we can show that the flesh is an ultimate notion, that it is not the union or compound of two substances, but thinkable by itself, if there is a relation of the visible with itself that traverses me and constitutes me as a seer, this circle which I do not form, which forms me, this coiling over of the visible upon the visible, can traverse, animate other bodies as well as my own. And if I was able to understand how this wave arises within me, how the visible which is yonder is simultaneously my landscape, I can understand a fortiori that elsewhere it also closes over upon

itself and that there are other landscapes besides my own. If it lets itself be captivated by one of its fragments, the principle of captation is established, the field open for other Narcissus, for an "intercorporeity." If my left hand can touch my right hand while it palpates the tangles, can touch it touching, can turn its palpation back upon it, why, when touching the hand of another, would I not touch in it the same power to espouse the things that I have touched in my own? It is true that "the things" in question are my own, that the whole operation takes place (as we say) "in me," within my landscape, whereas the problem is to institute another landscape. When one of my hands touches the other, the world of each opens upon that of the other because the operation is reversible at will, because they both belong (as we say) to one sole space of consciousness, because one sole man touches one sole thing through both hands. But for my two hands to open upon one sole world, it does not suffice that they be given to one sole consciousness—or if that were the case the difficulty before us would disappear: since other bodies would be known by me in the same way as would be my own, they and I would still be dealing with the same world. No, my two hands touch the same things because they are the hands of one same body. And yet each of them has its own tactile experience. If nonetheless they have to do with one sole tangible, it is because there exists a very peculiar relation from one to the other, across the corporeal space—like that holding between my two eyes—making of my hands one sole organ of experience, as it makes of my two eyes the channels of one sole Cyclopean vision. A difficult relation to conceive—since one eye, one hand, are capable of vision, of touch, and since what has to be comprehended is that these visions, these touches, these little subjectivities, these "consciousnesses of . . ." could be assembled like flowers into a bouquet, when each being "consciousness of," being For Itself, reduces the others into objects. We will get out of the difficulty only by renouncing the bifurcation of the "consciousness of" and the object, by admitting that my synergic body is not an object, that it assembles into a cluster the "consciousnesses" adherent to its hands, to its eyes, by an operation that is in relation to them lateral, transversal; that "my consciousness" is not the synthetic, uncreated, centrifugal unity of a multitude of "consciousnesses of . . ." which would be centrifugal like it is, that it is sustained, subtended, by the prereflective and preobjective unity of my

body. This means that while each monocular vision, each touching with one sole hand has its own visible, its tactile, each is bound to every other vision, to every other touch; it is bound in such a way as to make up with them the experience of one sole body before one sole world, through a possibility for reversion, reconversion of its language into theirs, transfer, and reversal, according to which the little private world of each is not juxtaposed to the world of all the others, but surrounded by it, levied off from it, and all together are a Sentient in general before a Sensible in general. Now why would this generality, which constitutes the unity of my body, not open it to other bodies? The handshake too is reversible; I can feel myself touched as well and at the same time as touching, and surely there does not exist some huge animal whose organs our bodies would be, as, for each of our bodies, our hands, our eyes are the organs. Why would not the synergy exist among different organisms, if it is possible within each? Their landscapes interweave, their actions and their passions fit together exactly: this is possible as soon as we no longer make belongingness to one same "consciousness" the primordial definition of sensibility, and as soon as we rather understand it as the return of the visible upon itself, a carnal adherence of the sentient to the sensed and of the sensed to the sentient. For, as overlapping and fission, identity and difference, it brings to birth a ray of natural light that illuminates all flesh and not only my own. It is said that the colors, the tactile reliefs given to the other, are for me an absolute mystery, forever inaccessible. This is not completely true; for me to have not an idea, an image, nor a representation, but as it were the imminent experience of them, it suffices that I look at a landscape, that I speak of it with someone. Then, through the concordant operation of his body and my own, what I see passes into him, this individual green of the meadow under my eyes invades his vision without quitting my own, I recognize in my green his green, as the customs officer recognizes suddenly in a traveler the man whose description he had been given. There is here no problem of the *alter ego* because it is not I who sees, not *he* who sees, because an anonymous visibility inhabits both of us, a vision in general, in virtue of that primordial property that belongs to the flesh, being here and now, of radiating everywhere and forever, being an individual, of being also a dimension and a universal.

What is open to us, therefore, with the reversibility of the

visible and the tangible, is—if not yet the incorporeal—at least an incorporeal being, a presumptive domain of the visible and the tangible, which extends further than the things I touch and see at present.

There is a circle of the touched and the touching, the touched takes hold of the touching; there is a circle of the visible and the seeing, the seeing is not without visible existence; <sup>3</sup> there is even an inscription of the touching in the visible, of the seeing in the tangible—and the converse; there is finally a propagation of these exchanges to all the bodies of the same type and of the same style which I see and touch—and this by virtue of the fundamental fission or segregation of the sentient and the sensible which, laterally, makes the organs of my body communicate and founds transitivity from one body to another.

As soon as we see other seers, we no longer have before us only the look without a pupil, the plate glass of the things with that feeble reflection, that phantom of ourselves they evoke by designating a place among themselves whence we see them: henceforth, through other eyes we are for ourselves fully visible; that lacuna where our eyes, our back, lie is filled, filled still by the visible, of which we are not the titlars. To believe that, to bring a vision that is not our own into account, it is to be sure inevitably, it is always from the unique treasury of our own vision that we draw, and experience therefore can teach us nothing that would not be outlined in our own vision. But what is proper to the visible is, we said, to be the surface of an inexhaustible depth: this is what makes it able to be open to visions other than our own. In being realized, they therefore bring out the limits of our factual vision, they betray the solipsist illusion that consists in thinking that every going beyond is a surpassing accomplished by oneself. For the first time, the seeing that I am is for me really visible; for the first time I appear to myself completely turned inside out under my own eyes. For the first time also, my movements no longer proceed unto the things to be seen, to be touched, or unto my own body occupied in seeing and touching them, but they address themselves to the body in general and for itself (whether it be my own or that of another).

3. ERROR: Here is inserted between brackets, in the course of the text itself, the note: "what are these adhesions compared with those of the voice and the hearing?"

because for the first time, through the other body, I see that, in its coupling with the flesh of the world, the body contributes more than it receives, adding to the world that I see the treasure necessary for what the other body sees. For the first time, the body no longer couples itself up with the world, it clasps another body, applying [itself to it] \* carefully with its whole extension, forming tirelessly with its hands the strange statue which in its turn gives everything it receives; the body is lost outside of the world and its goals, fascinated by the unique occupation of floating in Being with another life, of making itself the outside of its inside and the inside of its outside. And henceforth movement, touch, vision, applying themselves to the other and to themselves, return toward their source and, in the patient and silent labor of desire, begin the paradox of expression.

Yet this flesh that one sees and touches is not all there is to flesh, nor this massive corporeity all there is to the body. The reversibility that defines the flesh exists in other fields; it is even incomparably more agile there and capable of weaving relations between bodies that this time will not only enlarge, but will pass definitively beyond the circle of the visible. Among my movements, there are some that go nowhere—that do not even go find in the other body their resemblance or their archetype: these are the facial movements, many gestures, and especially those strange movements of the throat and mouth that form the cry and the voice. Those movements end in sounds and I hear them. Like crystal, like metal and many other substances, I am a sonorous being, but I hear my own vibration from within; as Malraux said, I hear myself with my throat. In this, as he also has said, I am incomparable; my voice is bound to the mass of my own life as is the voice of no one else. But if I am close enough to the other who speaks to hear his breath and feel his effervescence and his fatigue, I almost witness, in him as in myself, the awesome birth of vociferation. As there is a reflexivity of the touch, of sight, and of the touch-vision system, there is a reflexivity of the movements of phonation and of hearing; they have their sonorous inscription, the vociferations have in me their motor echo. This new reversibility and the emergence of

4. EDITOR: These words, which we reintroduce into the text, had been erased apparently by error.

the flesh as expression are the point of insertion of speaking and thinking in the world of silence.<sup>5</sup>

At the frontier of the mute or solipsist world where, in the presence of other seers, my visible is confirmed as an exemplar of a universal visibility, we reach a second or figurative meaning of vision, which will be the *intuitus mentis* or idea, a sublimation of the flesh, which will be mind or thought. But the factual presence of other bodies could not produce thought or the idea if its seed were not in my own body. Thought is a relationship with oneself and with the world as well as a relationship with the other; hence it is established in the three dimensions at the same time. And it must be brought to appear directly in the infrastructure of vision. Brought to appear, we say, and not brought to birth: for we are leaving in suspense for the moment the question whether it would not be already implicated there. Manifest as it is that feeling is dispersed in my body, that for example my hand touches, and that consequently we may not in advance ascribe feeling to a thought of which it would be but a mode—it yet would be absurd to conceive the touch as a colony of assembled tactile experiences. We are not here proposing any empiricist genesis of thought: we are asking precisely what is that central vision that joins the scattered visions, that unique touch that governs the whole tactile life of my body as a unit, that I think that must be able to accompany all our experiences. We are proceeding toward the center, we are seeking to comprehend how there is a center, what the unity consists of, we are not

5. ERROR: Inserted here between brackets: "In what sense we have not yet introduced thinking: to be sure, we are not in the in-itself. From the moment we said *seeing*, *visible*, and described the dehiscence of the sensible, we were, if one likes, in the order of thought. We were not in it in the sense that the thinking we have introduced was *there is*, and not it *appears to me that . . .* (appearing that would make up the whole of being, self-appearing). Our thesis is that this *there is* by inherence is necessary, and our problem to show that thought, in the restrictive sense (pure signification, thought of seeing and of feeling), is comprehensible only as the accomplishment by other means of the will of the *there is*, by sublimation of the *there is* and realization of an invisible that is exactly the reverse of the visible, the power of the visible. Thus between sound and meaning, speech and what it means to say, there is still the relation of reversibility, and no question of priority, since the exchange of words is exactly the differentiation of which the thought is the integral."

saying that it is a sum or a result; and if we make the thought appear upon an infrastructure of vision, this is only in virtue of the uncontested evidence that one must see or feel in some way in order to think, that every thought known to us occurs to a flesh.

Once again, the flesh we are speaking of is not matter. It is the coiling over of the visible upon the seeing body, of the tangible upon the touching body, which is attested in particular when the body sees itself, touches itself seeing and touching the things, such that, simultaneously, as tangible it descends among them, as touching it dominates them all and draws this relationship and even this double relationship from itself, by dehiscence or fission of its own mass. This concentration of the visibles about one of them, or this bursting forth of the mass of the body toward the things, which makes a vibration of my skin become the sleek and the rough, makes me follow with my eyes the movements and the contours of the things themselves, this magical relation, this pact between them and me according to which I lend them my body in order that they inscribe upon it and give me their resemblance, this fold, this central cavity of the visible which is my vision, these two mirror arrangements of the seeing and the visible, the touching and the touched, form a close-bound system that I count on, define a vision in general and a constant style of visibility from which I cannot detach myself, even when a particular vision turns out to be illusory, for I remain certain in that case that in looking closer I would have had the true vision, and that in any case, whether it be this one or another, *there is a true vision*. The flesh (of the world or my own) is not contingency, chaos, but a texture that returns to itself and conforms to itself. I will never see my own retinas, but if one thing is certain for me it is that *one* would find at the bottom of my eyeballs those dull and secret membranes. And finally, I believe that I have a man's senses, a human body—because the spectacle of the world that is my own, and which, to judge by our confrontations, does not notably differ from that of the others, with me as with them refers with evidence to typical dimensions of visibility, and finally to a virtual focus of vision, to a detector also typical, so that at the joints of the opaque body and the opaque world there is a ray of generality and of light. Conversely, when, starting from the body, I ask how it makes itself a seer, when I examine the critical

region of the aesthesiological body, everything comes to pass (as we have shown in an earlier work<sup>6</sup>) as though the visible body remained incomplete, gaping open; as though the physiology of vision did not succeed in closing the nervous functioning in upon itself, since the movements of fixation, of convergence, are suspended upon the advent to the body of a visible world for which they were supposed to furnish the explanation; as though, therefore, the vision came suddenly to give to the material means and instruments left here and there in the working area a convergence which they were waiting for; as though, through all these channels, all these prepared but unemployed circuits, the current that will traverse them was rendered probable, in the long run inevitable: the current making of an embryo a newborn infant, of a visible a seer, and of a body a mind, or at least a flesh. In spite of all our substantialist ideas, the seer is being premeditated in counterpoint in the embryonic development; through a labor upon itself the visible body provides for the hollow whence a vision will come, inaugurates the long maturation at whose term suddenly it will see, that is, will be visible for itself, will institute the interminable gravitation, the indefatigable metamorphosis of the seeing and the visible whose principle is posed and which gets underway with the first vision. What we are calling flesh, this interiorly worked-over mass, has no name in any philosophy. As the formative medium of the object and the subject, it is not the atom of being, the hard in itself that resides in a unique place and moment: one can indeed say of my body that it is not *elsewhere*, but one cannot say that it is *here* or *now* in the sense that objects are; and yet my vision does not soar over them, it is not the being that is wholly knowing, for it has its own inertia, its ties. We must not think the flesh starting from substances, from body and spirit—for then it would be the union of contradictories—but we must think it, as we said, as an element, as the concrete emblem of a general manner of being. To begin with, we spoke summarily of a reversibility of the seeing and the visible, of the touching and the touched. It is time to emphasize that it is a reversibility always imminent and never realized in fact. My left hand is always on the verge of touching my right hand touching the things, but I never reach coincidence; the coincidence eclipses at the moment of realization, and

6. *The Structure of Behavior* [trans. Alden L. Fisher (Boston, 1963)].

one of two things always occurs: either my right hand really passes over to the rank of touched, but then its hold on the world is interrupted; or it retains its hold on the world, but then I do not really touch it—my right hand touching, I palpate with my left hand only its outer covering. Likewise, I do not hear myself as I hear the others, the sonorous existence of my voice is for me as it were poorly exhibited; I have rather an echo of its articulated existence, it vibrates through my head rather than outside. I am always on the same side of my body; it presents itself to me in one invariable perspective. But this incessant escaping, this impotency to superpose exactly upon one another the touching of the things by my right hand and the touching of this same right hand by my left hand, or to superpose, in the exploratory movements of the hand, the tactile experience of a point and that of the "same" point a moment later, or the auditory experience of my own voice and that of other voices—this is not a failure. For if these experiences never exactly overlap, if they slip away at the very moment they are about to rejoin, if there is always a "shift," a "spread," between them, this is precisely because my two hands are part of the same body, because it moves itself in the world, because I hear myself both from within and from without. I experience—and as often as I wish—the transition and the metamorphosis of the one experience into the other, and it is only as though the hinge between them, solid, unshakable, remained irremediably hidden from me. But this hiatus between my right hand touched and my right hand touching, between my voice heard and my voice uttered, between one moment of my tactile life and the following one, is not an ontological void, a non-being: it is spanned by the total being of my body, and by that of the world; it is the zero of pressure between two solids that makes them adhere to one another. My flesh and that of the world therefore involve clear zones, clearings, about which pivot their opaque zones, and the primary visibility, that of the *quale* and of the things, does not come without a second visibility, that of the lines of force and dimensions, the massive flesh without a rarefied flesh, the momentary body without a glorified body. When Husserl spoke of the horizon of the things—of their exterior horizon, which everybody knows, and of their "interior horizon," that darkness stuffed with visibility of which their surface is but the limit—it is necessary to take the term seriously. No more than are the sky or the earth is the horizon a collection of

things held together, or a class name, or a logical possibility of conception, or a system of "potentiality of consciousness": it is a new type of being, a being by porosity, pregnancy, or generality, and he before whom the horizon opens is caught up, included within it. His body and the distances participate in one same corporeity or visibility in general, which reigns between them and it, and even beyond the horizon, beneath his skin, unto the depths of being.

We touch here the most difficult point, that is, the bond between the flesh and the idea, between the visible and the interior armature which it manifests and which it conceals. No one has gone further than Proust in fixing the relations between the visible and the invisible, in describing an idea that is not the contrary of the sensible, that is its lining and its depth. For what he says of musical ideas he says of all cultural beings, such as *The Princess of Clèves* and *René*, and also of the essence of love which "the little phrase" not only makes present to Swann, but communicable to all who hear it, even though it is unbeknown to themselves, and even though later they do not know how to recognize it in the loves they only witness. He says it in general of many other notions which are, like music itself "without equivalents," "the notions of light, of sound, of relief, of physical voluptuousness, which are the rich possessions with which our inward domain is diversified and adorned." Literature, music, the passions, but also the experience of the visible world are—no less than is the science of Lavoisier and Ampère—the exploration of an invisible and the disclosure of a universe of ideas.<sup>7</sup> The difference is simply that this invisible, these ideas, unlike those of that science, cannot be detached from the sensible appearances and be erected into a second positivity. The musical idea, the literary idea, the dialectic of love, and also the articulations of the light, the modes of exhibition of sound and of touch speak to us, have their logic, their coherence, their points of intersection, their concordances, and here also the appearances are the disguise of unknown "forces" and "laws." But it is as though the secrecy wherein they lie and whence the literary expression draws them were their proper mode of existence. For these

is a part of the visible in which it opens forth, the sense upon which the arrangement of the sounds opens reflects back upon that arrangement. For the linguist language is an ideal system, a fragment of the intelligible world. But, just as for me to see it is not enough that my look be visible for X, it is necessary that it be visible for itself, through a sort of torsion, reversal, or specular phenomenon, which is given from the sole fact that I am born; so also, if my words have a meaning, it is not *because* they present the systematic organization the linguist will disclose, it is because that organization, like the look, refers back to itself: the operative Word is the obscure region whence comes the instituted light, as the muted reflection of the body upon itself is what we call natural light. As there is a reversibility of the seeing and the visible, and as at the point where the two metamorphoses cross what we call perception is born, so also there is a reversibility of the speech and what it signifies; the signification is what comes to seal, to close, to gather up the multiplicity of the physical, physiological, linguistic means of elocution, to contract them into one sole act, as the vision comes to complete the aesthetological body. And, as the visible takes hold of the look which has unveiled it and which forms a part of it, the signification re-bounds upon its own means, it annexes to itself the speech that becomes an object of science, it antedates itself by a retrograde movement which is never completely belied—because already, in opening the horizon of the nameable and of the sayable, the speech acknowledged that it has its place in that horizon; because no locutor speaks without making himself in advance allocutory, *be it only for himself*; because with one sole gesture he closes the circuit of his relation to himself and that of his relation to the others and, with the same stroke, also sets himself up as *delocutory*, speech of which one speaks: he offers himself and offers every word to a universal Word. We shall have to follow more closely this transition from the mute world to the speaking world. For the moment we want only to suggest that one can speak neither of a destruction nor of a conservation of silence (and still less of a destruction that conserves or of a realization that destroys—which is not to solve but to pose the problem). When the silent vision falls into speech, and when the speech in turn, opening up a field of the nameable and the sayable, inscribes itself in that field, in its place, according to its truth—in short, when it metamorphoses the structures of the visible world

and makes itself a gaze of the mind, *intuitus mentis*—this is always in virtue of the same fundamental phenomenon of reversibility which sustains both the mute perception and the speech and which manifests itself by an almost carnal existence of the idea, as well as by a sublimation of the flesh. In a sense, if we were to make completely explicit the architectonics of the human body, its ontological framework, and how it sees itself and hears itself, we would see that the structure of its mute world is such that all the possibilities of language are already given in it. Already our existence as seers (that is, we said, as beings who turn the world back upon itself and who pass over to the other side, and who catch sight of one another, who see one another with eyes) and especially our existence as sonorous beings for others and for ourselves contain everything required for there to be speech from the one to the other, speech about the world. And, in a sense, to understand a phrase is nothing else than to fully welcome it in its sonorous being, or, as we put it so well, to *hear what it says* (*l'entendre*). The meaning is not on the phrase like the butter on the bread, like a second layer of "psychic reality" spread over the sound: it is the totality of what is said, the integral of all the differentiations of the verbal chain; it is given with the words for those who have ears to hear. And conversely the whole landscape is overrun with words as with an invasion, it is henceforth but a variant of speech before our eyes, and to speak of its "style" is in our view to form a metaphor. In a sense the whole of philosophy, as Husserl says, consists in restoring a power to signify, a birth of meaning, or a wild meaning, an expression of experience by experience, which in particular clarifies the special domain of language. And in a sense, as Valéry said, language is everything, since it is the voice of no one, since it is the very voice of the things, the waves, and the forests. And what we have to understand is that there is no dialectical reversal from one of these views to the other; we do not have to reassemble them into a synthesis: they are two aspects of the reversibility which is the ultimate truth.
